DETAILED ACTION

The following is an examiner's statement of reasons for allowance: The present invention is directed to a comfortable earphone cushion. Independent claims 1, 27 and 34 disclose the uniquely distinct feature of an elastomer earphone ring comprising microcapsules of a material capable of an endothermic phase change at a substantially constant temperature profiding for improved comfort for the wearer. Independent claim 33 discloses the uniquely distinct feature of an acoustically matched impedance of the output face of the earphone speaker and the output face of the resilient ring of the earphone when the speaker is coupled to the ring.

The closest prior art, Gorike (US 4,005,278) teaches a headphone comprising a torroidal seal ring and Holman (US 6,099,894) teaches gel coated microcapsules with thermal phase change capabilities. The prior art fails to anticipate or render the independent claims obvious.

The following references were cited: Haskel (US 1498727) teaches a removable earphone cushion for telephones; Bertagna (US 4588868) teaches an over the head style headset with outwardly flared pads and Jones (UK Patent Application GB 2305063) teaches a headset with means to limit cushion compression.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Amendment

The declaration filed on 09/22/2004 under 37 CFR 1.131 is sufficient to overcome the Kinoshita reference.
